Once you enter the information (don't forget punctuation on the end of the sentences) the program will populate THAT identical information onto ALL the activities for you!

I highly recommend looking through each page to make sure all the words and sentences "fit" correctly in the spaces.

We know that word "hill" takes up less space than "much."

I tested many **MANY** sight words to make this.

Print only the activities and pages YOU desire for your learners.

Now go have fun with YOUR customized sight word activities.

Some of the activities may allow you to use sight words that contain more than 5 letters, but the word puzzles do not. I formatted this product for sight words that are 5 letters or less. The reason came down to print size. I didn't want the size of most of the activities to be too small that little learners can't read and use properly.
